

➔ REMOTE & MOBILE DATA ACCESS

What is remote & mobile data access?

The method of dialling into your network or data centre from another location to access data and resources.

Access your network resources from any location - at home, on the road, from a client's site etc.

Many businesses depend on employees working remotely. Busy professionals need 'always-available' access to their e-mails and network resources to increase productivity.

We use industry standard encryption to keep your business data secure.

Work from home or on the move - access network resources like you're in the office!

What you need:

SSL-VPN (Secure Sockets Layer - Virtual Private Network) is a reliable solution for e-mail, internet access, Word/Excel files etc. **No new software** is required on the client machine.

Remote Desktop Services is used to query databases or run server applications. A secure remote session is created on the server for each remote user.

Secure e-mail hosting...

Our dedicated e-mail servers ensure continuity of your business communications.

E-mail can be accessed from any location using a mobile phone, PDA, laptop etc.

Use any e-mail client (Microsoft Outlook, Lotus Notes etc.).

REMOTE ACCESS BENEFITS:

- ✓ **Increased security** with backups stored in a different location to the originals
- ✓ **No user intervention** required to backup data (changing tapes, labelling CDs etc.)
- ✓ **No extra hardware** to purchase, software based connections
- ✓ **Industry standard encryption** used to transmit data
- ✓ **Multi-platform service** integrates Windows, Macintosh, Linux/Unix etc.
- ✓ **Continue working whilst travelling** on a train, aircraft etc.
